

Good news! OfficeJS is working now with the latest version of [JIO](#)!

Want to try?

There is a demo version [here](#). Developpers who want to test there JIO storage connector, they just have to clone the [OfficeJS repository](#), create a server on localhost which root is the cloned repository path, then go to <http://localhost> and enjoy!

If you have any question, just ask on the OfficeJS forum.

note:

- SVG-Editor may not work on some browser
- For revision managing, the conflict solver user interface is not implemented
- Document are saved with *posted_date*, *last_modified* metadata. You can't make your own metadata for now.
- OfficeJS is still a prototype, it will be reworked from scratch
